

REMOTE MONITORING & WIRELESS SENSOR SYSTEMS

Protect Your Facility. Prevent Mayhem. Improve Operations.

- Cloud-based monitoring and alert system.
- Sends a text message, phone call, or email when a measurement exceeds range.
- Robust analytics with automated reporting and logs.
- Full history of measurement activity.
- Define thresholds to determine when measurement is out of range. Setup notifications when thresholds are breached.

Hiscall, Inc. now offers cloud-based monitoring and alert systems that uses wireless sensors to track critical measurements on equipment and in environments.

Restaurants/Schools - Temperature monitoring walk-in coolers and freezers to protect their food inventory and keep food safe.

Facilities Management - Temperature monitoring for server room, lobbies. Water detection sensors for leak detection. Energy savings and flood risk reduction.

Labs & Pharma - Temperature monitoring of medicine and vaccine coolers, freezers and ultra-low freezers to ensure quality and lifecycle of meds and vaccines.

Industrial Manufacturing - Vibration monitoring of pumps and motors. Temperature monitoring of essential business process. Prevent downtime of critical machines, proactive maintenance, and quality of goods.
